

Cargo moistening system with recycling water

Option Code: [-CAMO-RECY-]

Portal for cargo moistening with recycling water.

Illustrations may differ from the actual scope of delivery

Function

The nozzle portal is used to humidify dry, dusty loads. The recycling water used for this comes from the recycling tank of the wheel washing system.

Technical description

Hot-dip galvanised portal with fixed nozzles for moistening the load with recycling water from the recycling tank of the wheel washing system. Pressurised water line for connection to one of the washing elements.

The triggering is analogous to that of wheel washing system via the vehicle identification sensor. No additional pump is required.

Specifications

Portal with fixed nozzles

• Material	Hot-dip galvanised steel
• Passage height	450 cm
• Dimension (H×W)	458×365 cm
• Nozzle Ø	3 mm

General scope of supply

- Portal with fixed nozzles
- Drain valve 2"
- Hose lines, hose clips
- Fittings
- Mounting material
