

MobyHeat FSC2

Option Code: [-HEAT-FSC2-]

Pump pipeline heating with thermostat for light constant frost.

Illustrations may differ from the actual scope of delivery

Function

The pump pipeline heating ensures that the wheel washing system can be operated in light constant frost that endures for some time. A heating cable is wound around the pump pipeline at the water level. If the temperature falls below the temperature preset on the thermostat, the heating cable heats up and prevents ice formation.

Only in combination with the optional *MobyHeat FSC1*.

Technical description

Thermostat built into the control cabinet with an external temperature sensor. Powerful heating cable with a maximum heating temperature of 65 °C and connecting cable.

Specifications

Heating cable

• Length *	
• Max. heating temperature	65 °C
• Power consumption *	0.5 A
• Power *	0.9 kW
• Protection type	IP67

* For max. 4 submersible pumps

General scope of supply

- Heating cable, connecting cable
- Thermostat, relay
- Extension in the control cabinet for a maximum of 4 submersible pumps
