

Manual wash “Heavy”

Option Code: [-MAWS-HD01-]

Manual device for intensive cleaning of vehicles.

Illustrations may differ from the actual scope of delivery

Function

The optional *manual wash “Heavy”* enables intensive and targeted cleaning of construction machinery and vehicles with a powerful water jet under medium pressure. If it is used in the entrance or exit area of the system, the washing water flows back into the recycling tank and is re-used following the treatment process.

Ideal for follow-up cleaning of hard-to-reach areas following the automatic washing process or for autonomous cleaning.

Technical description

Powerful 11 kW submersible pump MobyPump 50 with piping mounted in the recycling tank of the washing system. Electric hose reel for rolling up the pressure hose, including control box with start/stop function and emergency OFF switch. Multi-adjustable, high-quality jet lance. Pressure relief valve to prevent damage when the pump is running and the jet lance is closed. Drain valve and quick couplings for frost protection in winter.

Specifications

• Water volume max.	500 L/min
• System pressure max.	5 bar
• Electric power	11 kW
• Hose length	20 m

General scope of supply

- 1 hose reel, electric roll-up with hose
- 1 multi-adjustable jet lance with strap grip
- 1 control box with EMERGENCY OFF function
- 1 immersion pump MobyPump 50
- Drain valve
- Hoses, piping, pressure relief valve
- Extension in the control cabinet
