

# Manual wash “Regular”

Option Code: [-MAWS-]

Manual device for cleaning vehicles and the surroundings.

Illustrations may differ from the actual scope of delivery

## Function

The optional *Manual wash “Regular”* can be used to clean vehicles, devices or machines. If it is used in the entrance or exit area of the system, the washing water flows back into the recycling tank and is re-used following the treatment process.

Also ideal for cleaning the system and surroundings.

## Technical description

High-quality 20 metre long fire hose with adjustable jet lance and galvanised hose support. One of the submersible pumps of the wheel washing system is used to feed the cleaning equipment via a shut-off flap and manual valve. No additional pump is required. The submersible pump is activated directly on the control cabinet via a rotary switch. Quick-release couplings allow the hose and the jet lance to be removed at any time.

## Specifications

• Length of fire hose	20 m
• Water volume	120 L/min
• Water pressure	2 bar

## General scope of supply

- Butterfly valve DN100
- Valve 2"
- Fire hose
- Adjustable jet lance
- Hose support
- Extension in the control cabinet
