

Separate water tank

Option Code: [-TANK-]

Separate water tank to compensate for lost water.

Illustrations may differ from the actual scope of delivery

Function

If no water connection is available near a wheel washing system, the separate water tank can be used to compensate for lost water. Placement is at a higher level than the washing water level in the recycling tanks. If the water level in the recycling tank drops, the float valve automatically opens the supply line from the separate water tank. The lost water is then replenished.

Technical description

Water tank package consisting of a solid steel structure with profile frame (5 mm) and plate. Surface treatment by chemical cleaning, primer 60 µm and top coat 60 µm Traffic blue (RAL 5017).

Drain cover with quick coupling for easy connection of the separate tank to the wheel washing system.
