

Customized solutions

Soluciones a medida

We develop customized Tailor Made Line solutions for customers facing special requirements following detailed analysis. These individualized systems for dust binding are precisely tailored to the respective operating conditions and requirements and are perfectly suited to a wide range of applications. Our worldwide specialists are available at any time for a non-binding consultation.

Opciones populares

A great addition

The basic MobyDick systems already come with a very wide range of functions. Options that are added on are also particularly appreciated by customers.

El complemento ideal

Los sistemas MobyDick disponen de un amplio abanico de funciones incluso en su equipamiento básico. Además, nuestros clientes valoran especialmente las siguientes opciones.

Remote control

Control remoto

The remote control, consisting of a command unit and a receiver unit, allows the dust-binding system to be operated from up to 300 m away. In addition to the on/off function, the horizontal and vertical movement can also be controlled with the S (Single) and M (Multi) models.

El dispositivo de control remoto, compuesto por una unidad de control y otra receptora, permite manejar el sistema de captación de polvo a una distancia de hasta 300 metros. En los modelos S (Single) y M (Multi), además del encendido y apagado, se pueden controlar las funciones de basculación horizontal y vertical.

Wheelset

Remolque

Consisting of three wheels and drawbar (not approved for road traffic). The wheelset can be easily mounted onto the dust-binding system at any time. It ensures a high degree of mobility on site. The extra-wide wheels keep the machine from sinking into soft ground.

Compuesto por tres ruedas y una barra de tiro (sin permiso de circulación). El remolque puede montarse fácilmente en los sistemas de captación de polvo en cualquier momento. Garantiza un alto grado de movilidad en el lugar de uso. Las ruedas extraordinariamente anchas evitan que la máquina se hunda en terrenos blandos.
